

Canopy and French Flower Bucket Printie

French Flower Bucket

Print onto medium weight cardstock. Cut on outline and work the piece over the barrel of a marker or something similar to help it curve. Do not crease. Overlap the straight ends about 1/8" or less and glue together with tacky glue or white glue. Clamp or hold until joint is secure.

On a scrap piece of cardstock, trace around a dime. Apply glue to the small end of the bucket and fit it inside the dime circle, adjusting as necessary to maintain a circle. Allow to dry thoroughly. Cut away the excess cardstock and paint as desired. A dark silver color to represent galvanized metal or medium-dark green enamel are appropriate for authentic French flower buckets, but any colors or patterns may be used.
